

Industrial Challenges: Dry Milling and Limited Equipment

Brian Karim, Lincoln Electric

Many established companies utilize dry milling operations to reduce the particle size of raw feedstock chemicals. As the companies grow in size, the demand for greater capacity and additional chemicals also increases. However, said companies are reluctant to spend on additional equipment and will instead urge its engineers to increase the efficiency of their current fleet. This often presents challenges to the engineers for extending their utility. This talk discusses such challenges and their impact to the business.
